## Description:

### PandwaRF Rogue Pro

The PandwaRF Rogue Pro version is an improved variant of the PandwaRF, dedicated to brute forcing wireless devices available on the market. The embedded Brute Force engine has been reworked to reduce the brute force duration.

#### *Including predefined coding patterns*

PandwaRF Rogue Pro also includes several predefined coding patterns (aka Function masks) corresponding to common wireless devices available on the market. Once you have a RF capture of the target device, you just need to set up the Function Mask. PandwaRF Rogue Pro will optimize the brute force duration for you. You don't have to worry about codes being sent multiple times. This allows a brute force session to be 2x to 30x faster than the public version of PandwaRF. The brute force speed increase depends on the device being attacked. Please note that Rogue Pro doesn't include a device database, which is reserved for public agencies (Rogue Gov).

#### *Codeword length up to 32 bits*

While the PandwaRF (Public) can brute force a codeword length of up to 16 bits (65K different codes), the Rogue Pro supports 32-bit brute force (4 billion different codewords). Note that brute forcing a 32-bit code is extremely long and not efficient.

#### *Task splitting*

PandwaRF Rogue Pro also allows BF task splitting. You can resume a BF operation from where you stopped it. This allows splitting a long Brute Force session into several shorter sessions.

### PandwaRF Rogue Gov

The PandwaRF Rogue Gov variant provides the same features as the Pro variant, plus some additional sensitive features.

Please contact us for more information on PandwaRF Rogue Gov.
